A Systemic Perspective to Managing Complexity with Enterprise Architecture

Saha, Pallab 2013-09-30

Organizational complexity is an unavoidable aspect of all businesses, even larger ones, which can hinder their ability to react to sudden or disruptive change. However, with the implementation of enterprise architecture (EA), businesses are able to provide their leaders with the resources needed to address any arising challenges. A Systemic Perspective to Managing Complexity with Enterprise Architecture highlights the current advances in utilizing enterprise architecture for managing organizational complexity. By demonstrating the value and usefulness of EA, this book serves as a reference for business leaders, managers, engineers, enterprise architects, and many others interested in new research and approaches to business complexity.

Parametric Lie Group

Actions on Global Generalised Solutions of Nonlinear PDEs

Elemer Elad Rosinger 1998-10-31 Presents a solution of the harder part of the problem of defining globally arbitrary Lie group actions on such nonsmooth entities as generalized functions. This work addresses those who are interested in solving nonlinear PDEs, and in particular, in studying the Lie group symmetries of their classical or generalized solutions. This new method extends and completes earlier results of the author and collaborators, in which global Lie group actions on generalized functions were only defined in the case of projectable or fiber preserving Lie group actions. Digital Solutions for Contemporary Democracy and Government Kelvin Joseph Bwalya 2015-04-30 The dot-com revolution has brought many advances before unimagined. Of them all, it may be said that none have surpassed e-government in attracting a significant number of researchers and practitioners from around the world. However, the question remains whether everyone is ready to join the e-government movement, or if some are just blindly following the latest trend. Digital Solutions for Contemporary Democracy and Government touches on several key issues and challenges surrounding the recent e-government boom and offers practical solutions from those who have been a part of implementing e-government programs internationally. Due to its breadth of discussion on a variety of topics relating to the intersection of technology with

politics, democracy, and government, this authoritative book is a valuable reference source for professionals, researchers, and students in the field of e-government, information management, or knowledge management.

Leadership for a Digital World Annika Steiber

2022-05-07 The pace of change today is unprecedented. As more than one observer has said, change itself has changed. Technologies and markets in virtually every industry are now subject to rapid and unpredictable change, placing a premium on the ability to successfully manage new paradoxes, such as being entrepreneurial and efficient, as well as able to sense shifts and rapidly respond and secure enough stability for quality and efficiency. In short, enterprise leaders face a paradigm shift in management, and they will be forced to transform their organizations in order to survive in the 21st century. This book will provide leaders with the fundamental principles for managing a firm in the digital

The Future of Cross-Border Insolvency Irit Mevorach 2018

A fresh and insightful guide to post-financial crisis cross-border insolvency, this book interrogates the current regime and sets out a pattern to improve its future. In recent decades, and especially since the global financial crisis, a number of important initiatives have focused on developing effective solutions for managing the insolvency of multinational enterprises and financial institutions. Irit Mevorach here takes stock of the varying success of previous policy, and identifies the gaps and biases that could be bridged by a new approach. The book first sets

out the theoretical debates regarding cross-border insolvency and surveys the strengths and weaknesses of the prevailing method - modified universalism - synthesizing divergences into a rubric for both commercial entities and financial institutions. Adhering to these norms morerobustly, Mevorach argues, would enhance global welfare and produce the best outcomes for businesses and institutions. Drawing upon sources from international law as well as behavioural and economic theory, Mevorach considers how to translate modified universalism into binding international law and how to choose the right instrument for cross-border insolvency; the impact instrument design has on decisions and choices, and how to encourage compliance. In particular, the book proposes tools and mechanisms that could potentially overcome, or at least take into account, behavioural biases in decision-making in order to create a system that works for

Water Security The World Economic Forum Water Initiative 2012-02-24 The world is on the brink of the greatest crisis it has ever faced: a spiraling lack of fresh water. Groundwater is drying up, even as water demands for food production, for energy, and for manufacturing are surging. Water is already emerging as a headline geopolitical issue—and worsening water security will soon have dire consequences in many parts of the global economic system. Directed by UN Secretary General Ban Ki-Moon at the 2008 Davos Annual

Meeting, the World Economic Forum assembled the world's foremost group of public, private, non-governmental-organization and academic experts to examine the water crisis issue from all perspectives. The result of their work is this forecast—a stark, non-technical overview of where we will be by 2025 if we take a business-as-usual approach to (mis)managing our water resources. The findings are shocking. Perhaps equally stunning are the potential solutions and the recommendations that the group presents. All are included in this landmark publication. Water Security contains compelling commentary from leading decision-makers, past and present. The commentary is supported by analysis from leading academics of how the world economy will be affected if world leaders cannot agree on solutions. The book suggests how business and politics need to manage the energy-food-water-climate axis as leaders negotiate the details of the climate regime that replace

1999-08-31 This volume contains papers presented at the fourth working conference on Communications and Multimedia Security (CMS'99), held in Leuven, Belgium from September 20-21, 1999. The Conference, arranged jointly by Technical Committees 11 and 6 of the International Federation of Information Processing (IFIP), was organized by the Department of Electrical Engineering of the Katholieke Universiteit Leuven. The name "Communications and Multimedia Security" was used for the first time in 1995, when Reinhard Posch organized the first in this series of conferences in Graz, Austria, following up on the previously national (Austrian) IT Sicherheit conferences held in Klagenfurt

(1993) and Vienna (1994). In 1996, CMS took place in Essen, Germany; in 1997 the conference moved to Athens, Greece. The Conference aims to provide an international forum for presentations and discussions on protocols and techniques for providing secure information networks. The contributions in this volume review the state-of-the-art in communications and multimedia security, and discuss practical of topics experiences and new developments. They cover a wide spectrum including network security, web security, protocols for entity authentication and key agreement, protocols for mobile environments, applied cryptology, watermarking, smart cards, and legal aspects of digital signatures.

properly execute strategy? In this groundbreaking, thoroughly researched book, organizational expert Charles Heckscher argues that, in a global network of creation and production, the dominant organizations will be those that master the still-uncodified skills of collaboration--replacing the giants of the past century who thrived on the mastery of bureaucratic systems. Though there has been much discussion of teamwork and alliances in recent decades, Heckscher argues that we are still a long way from fully understanding how to manage fluid and inconstant collaborations; and that this is an area dominated far more by rhetoric than reality. Using a combination of theory and extensive real-life case studies, Heckscher pushes the boundary of organization design and illustrates how companies are able to create new, effective patterns of interactions, and how they can build a culture and infrastructure necessary to support them. For organizational leaders in search

of long-term competitive advantage, The Collaborative Enterprise offers sound research findings and invaluable insights.

The Handbook of Insurance-Linked Securities Pauline Barrieu 2010-06-15 "Luca Albertini and Pauline Barrieu are to be congratulated on this volume. Written in a period where structured projects in finance are having a difficult time, it is worthwhile to return to the cradle of securitisation: insurance. Spread out over three parts (life, non- life, and tax and regulatory issues) the

26 chapters, written mainly by practitioners, give an excellent overview of this challenging field of modern insurance. Methodology and examples nicely go hand in hand. The overall slant being towards actual analyses of concrete products. No doubt this book will become a milestone going forward for actuarial students, researchers, regulators and practitioners alike." —Paul Embrechts, Professor of Mathematics and Director of RiskLab, ETH Zurich The convergence of insurance with the capital markets has opened up an alternative channel for insurers to transfer risk, raise capital and optimize their regulatory reserves as well as offering institutions a source of relatively liquid investment with limited correlation with other exposures. One of the financial instruments allowing for the cession of insurance-related risks to the capital markets is Insurance-Linked Securities (ILS). impressive team of international market players, representing the various aspects and perspectives of this growing sector. The book presents the state of the art in Insurance-Linked Securitization, by exploring the various roles for the different parties involved in the transactions, the motivation for the transaction sponsors, the potential inherent pitfalls, the latest developments and transaction structures and the key challenges faced by the market. The book is organized into parts, each covering a specific topic or sector of the market. After a general overview of the ILS market, the Insurance-Linked Securitization process is studied in detail. A distinction is made between non-life and life securitization, due to the specificities of each sector. The process and all the actors involved are identified and considered in a comprehensive and systematic way. The concepts are first looked at in a general way, before the analysis of relevant case studies where the ILS

technology is applied. Particular focus is given to: the key stages in both non-life and life securitizations, including the general features of the transactions, the cedant's perspectives, the legal issues, the rating methodologies, the choice of an appropriate trigger and the risk modeling, the particular challenges related to longevity securitization, the investor's perspective and the question of the management of a portfolio of ILS, the general issues related to insurance-linked securitization, such as accounting and tax issues, regulatory issues and solvency capital requirements. The book is accompanied by a website www.wiley.com/go/albertini_barrieu_ILS which will feature updates and additions to the various contributions to follow market developments.

Service Availability Maria Toeroe 2012-03-12 Our society increasingly depends on computer-based systems; the number of applications deployed has increased dramatically in recent years and this trend is accelerating. Many of these applications are expected to provide their services continuously. The Service Availability Forum has recognized this need and developed a set of specifications to help software designers and developers to focus on the value added function of applications, leaving the availability management functions for the middleware. A practical and informative reference for the Service Availability Forum specifications, this book gives a cohesive explanation of the founding principles, motivation behind the design of the

specifications, and the solutions, usage scenarios and limitations that a final system may have. Avoiding complex mathematical explanations, the book takes a pragmatic approach by discussing issues that are as close as possible to the daily software design/development by practitioners, and yet at a level that still takes in the overall picture. As a result, practitioners will be able to use the specifications as intended. Takes a practical approach, giving guidance on the use of the specifications to explain the architecture, redundancy models and dependencies of the Service Availability (SA) Forum services Explains how service availability provides fault tolerance at the service level Clarifies how the SA Forum solution is supported by open source implementations of the middleware Includes fragments of code, simple example and use cases to give readers a practical understanding of the topic Provides a stepping stone for applications and system
