Green Politics Dustin Mulvaney 2011 From A-to-Z, the politics of these and similar "green" issues are thoroughly explored via 150 signed entries.

Consumption and Its Consequences Daniel Miller 2013-04-18 This is a book for those looking for different answers to some of today's most fundamental questions. What is a consumer society? Does being a consumer make us less authentic or more materialistic? How and why do we shop? How should we understand the economy? Is our seemingly insatiable desire for goods destroying the planet? Can we reconcile curbs on consumption with goals such as reducing poverty and social inequality? Miller responds to these questions by proposing feasible and, where possible, currently available alternatives, drawn mainly from his own original ethnographic research. Here you will find shopping analysed as a technology of love, clothing that sidesteps politics in tackling issues of immigration. There is an alternative theory of value that does not assume the economy is intelligent, scientific, moral or immoral. We see Coca-Cola as an example of localization, not globalization. We learn why the response to climate change will work only when we reverse our assumptions about the impact of consumption on citizens. Given the evidence that consumption is now central to the way we create and maintain our core values and relationships, the conclusions differ dramatically from conventional and accepted views as to its consequences for humanity and the planet.

Environment and Society Charles Harper 2017-03-13 The sixth edition of *Environment and Society* continues to connect issues about human societies, ecological systems, and the environment with data and perspectives from different fields. Clearly defined terms and theories help familiarize students from various backgrounds with the topics at hand. Each of the chapters is significantly updated with new data, concepts, and ideas. Chapter Three: Climate Change, Science and Diplomacy, is the most extensively revised with current natural science data and sociological insights. It also details the factors at play in the establishment of the Paris Agreement and its potential to affect global climate change. This edition elevates questions of environmental and climate justice in addressing the human-environment relations and concerns throughout the book. Finally, each chapter contains

embedded website links for further discussion or commentary on a topic, concludes with review and reflection questions, and suggests further readings and internet sources.

Sustaining the Earth George Tyler Miller 2004 In this 6th edition of SUSTAINING THE EARTH Miller has added an on-line Web-based resource, called the Resource Integration Guide. Updated quarterly with CNN® Today video clips, animations, and articles from InfoTrac® College Edition instructors will be able to seamlessly incorporate the most current news articles and up-to-the-minute research findings to support classroom instruction and text presentations. The content in the 6th edition of SUSTAINING THE EARTH by Tyler Miller is everything you have come to expect and more. Two new chapters on basic ecology (Chapters 3 and 4) have been added to this edition to enhance this science-based book. This text differs from Miller's comprehensive text, *LIVING IN THE ENVIRONMENT*, 13th Edition, because there is much less detail and more integration of topics, with a different chapter order. For example, the following topics have been integrated into single chapters: human population dynamics and urban problems are in Chapter 5, nonrenewable and renewable energy resources are in Chapter 6, terrestrial and aquatic biodiversity are in Chapter 7, water resources and water pollution are in Chapter 12, solid and hazardous waste are in Chapter 13, and environmental economics, politics, and worldviews are in Chapter 14. For the first time ever in a Miller textbook, students will receive a CD-ROM, entitled *Interactive Concepts in Environmental Science*. This groundbreaking addition integrates nearly 100 engaging animations and interactions with chapter summaries, flashcards, and Web-based quizzes. Organized by chapter, students will find links to relevant resources, narrated animations, interactive figures, and prompts to review material and test themselves. Miller has remained true to his hallmark features, such as high quality end-of-chapter questions, an orientation toward prevention rather than clean-up, an integration of Web resources and video, and a balanced presentation of controversial environmental issues.

Living in the Environment, Level 4 Miller 2011-01-01 Three principles of sustainability, solar energy, chemical cycling, and biodiversity, can guide us in making a shift to a more sustainable society. The City of Grace David Wadley 2019-11-29 In this sweeping appraisal of the urban condition, David Wadley argues that anything less than high-level resolution in modelling the well-being of inhabitants is wasting precious time. Humanity is encountering rising entropy,

caused by unsustainable economic and demographic expansion. Supported by a strong interdisciplinary backdrop featuring systems and crisis theories, *The City of Grace* tackles these obstacles by picturing gracious function and graceful form in a human-scale settlement. In an attempt to salvage things lost in the teleology of urban development over the last 100 years, the outlook is both heterodox and contrarian. How long can we all go on in the present way? In addressing grace, a more elevated concept than those focusing previous urban analyses, this manifesto aims not to placate or please but, instead, to get humanity to face the encompassing realities it tries so hard to forget.

Living in the Environment G. Tyler Miller 2016-12-05 In the new edition of *LIVING IN THE ENVIRONMENT*, authors Tyler Miller and Scott Spoolman continue to work with the National Geographic Society in developing a text designed to equip students with the inspiration and knowledge they need to make a difference in solving today's environmental issues. Using sustainability as the integrating theme, *LIVING IN THE ENVIRONMENT*, 19th Edition, provides clear introductions to the multiple environmental problems that we face and balanced discussions to evaluate potential solutions. New Core Case Studies for 11 of the book's 25 chapters bring important real-world stories to the forefront; new questions added to the captions of figures that involve data graphs give students additional practice evaluating data; and a new focus on learning from nature includes coverage of principles and applications of biomimicry in most chapters. The Origins of Modern Environmental Thought Joseph Edward De Steiguer 2006-09-15 *The Origins of Modern Environmental Thought* provides readers with a concise and lively introduction to the seminal thinkers who created the modern environmental movement and inspired activism and policy change. Beginning with a brief overview of the works of Thoreau, Mill, Malthus, Leopold, and others, de Steiguer examines some of the earliest philosophies that underlie the field. He then describes major socioeconomic factors in post-World War II America that created the milieu in which the modern environmental movement began, with the publication of Rachel Carson's *Silent Spring*. The following chapters offer summaries and critical reviews of landmark works by scholars who helped shape and define modern environmentalism. Among others, de Steiguer examines works by Barry Commoner, Paul Ehrlich, Kenneth Boulding, Garrett Hardin, Herman Daly, and Arne Naess. He describes the growth of the environmental movement from 1962 to 1973 and explains a number of factors that led to a decline in environmental interest during the mid-1970s. He then reveals changes in environmental awareness in the 1980s and concludes with commentary on the movement through 2004. Updated and revised from *The Age of Environmentalism*, this expanded edition includes three new chapters on Stewart Udall, Roderick Nash, and E. F. Schumacher, as well as a new concluding chapter, bibliography, and updated material throughout. This primer on the history and development of environmental consciousness and the many modern scholars who have shaped the movement will be useful to students in all branches of environmental studies and philosophy, as well as biology, economics, and physics.

A Hopeful Earth Sally Bishop Dyck 2010-10-01 The environment is God's creation and Christians should be at the front of the crowd when it comes to taking care of it. Yet we find ourselves in a creation crisis. *A Hopeful Earth*, a unique study, draws together the Christian faith of Bishop Sally Dyck and the scientific world of her niece, Sally Ehrman, to address this crisis. As these two dialogue, readers will find that these sometimes differing worldviews are both crucial to making lasting changes. They'll also discover how the church can reach out to the younger generation by joining them in the race to save the planet. *A Hopeful Earth* will bridge the gap between Jesus and the environment and guide readers in understanding that living as good stewards of God's creation is a significant component of what it means to follow Jesus.

How the World Changed Social Media Daniel Miller 2016-02-29 *How the World Changed Social Media* is the first book in *Why We Post*, a book series that investigates the findings of anthropologists who each spent 15 months living in communities across the world. This book offers a comparative analysis summarising the results of the research and explores the impact of social media on politics and gender, education and commerce. What is the result of the increased emphasis on visual communication? Are we becoming more individual or more social? Why is public social media so conservative? Why does equality online fail to shift inequality offline? How did memes become the moral police of the internet? Supported by an introduction to the project's academic framework and theoretical terms that help to account for the findings, the book argues that the only way to appreciate and understand something as intimate and ubiquitous as social media is to be immersed in the lives of the people who post. Only then can we discover how people all around the world have already transformed social media in such unexpected ways and assess the consequences

Ma Taffy, old and blind, sits in her usual spot on the veranda. No matter how the world tilts around

her, come hurricane or riot, she knows everything that goes on in this small community. Which is why, when her six-year-old nephew returns home from school with his dreadlocks shorn, she realises that trouble won't be far behind. And so she tells him the story of Alexander Bedward, the flying preacherman. She remembers what happened to the Rastaman and his helper, Bongo Moody; she thinks of Soft-Paw, the leader of the Angola gang, and what lies beneath her house. For trouble is brewing once more among the ramshackle lanes of Augustown, and as Ma Taffy knows, each day contains much more than its own hours, or minutes, or seconds. In fact, each day contains all of history...

The Comfort of Things Daniel Miller 2013-04-24 What do we know about ordinary people in our towns and cities, about what really matters to them and how they organize their lives today? This book visits an ordinary street and looks into thirty households. It reveals the aspirations and frustrations, the tragedies and accomplishments that are played out behind the doors. It focuses on the things that matter to these people, which quite often turn out to be material things – their house, the dog, their music, the Christmas decorations. These are the means by which they express who they have become, and relationships to objects turn out to be central to their relationships with other people – children, lovers, brothers and friends. If this is a typical street in a modern city like London, then what kind of society is this? It's not a community, nor a neighbourhood, nor is it a collection of isolated individuals. It isn't dominated by the family. We assume that social life is corrupted by materialism, made superficial and individualistic by a surfeit of consumer goods, but this is misleading. If the street isn't any of these things, then what is it? This brilliant and revealing portrayal of a street in modern London, written by one the most prominent anthropologists, shows how much is to be gained when we stop lamenting what we think we used to be and focus instead on what we are now becoming. It reveals the forms by which ordinary people make sense of their lives, and the ways in which objects become our companions in the daily struggle to make life meaningful.
