The Green Web Martin Holdgate 2014-04-08 This text is a history of the world's oldest global conservation body - the World Conservation Union, established in 1948 as a forum for governments, non-governmental organizations and individual conservationists. The author draws on unpublished archives to reveal the often turbulent story of the IUCN and its achievements in, and influence on, conservation

and environmental policy worldwide - establishing national parks and protected areas and defending threatened species.

Progress in Artificial Intelligence Luís Seabra Lopes 2009-10-07 This book contains a selection of higher quality and reviewed papers of the 14th Portuguese Conference on Artificial Intelligence, EPIA 2009, held in Aveiro, Portugal, in October 2009. The 55 revised full papers presented were

carefully reviewed and selected from a total of 163 submissions. The papers are organized in topical sections on artificial intelligence in transportation and urban mobility (AITUM), artificial life and evolutionary algorithms (ALEA), computational methods in bioinformatics and systems biology (CMBSB), computational logic with applications (COLA), emotional and affective computing (EAC), general artificial intelligence (GAI), intelligent robotics (IROBOT), knowledge discovery and business intelligence (KDBI), multi-agent systems (MASTA) social simulation and modelling (SSM), text mining and application (TEMA) as well as web and network intelligence (WNI).

Connectionist Models of Neurocognition and Emergent Behavior Eddy J.

Davelaar 2012 This volume collects together most of the papers presented at the Twelfth Neural Computation and Psychology Workshop (NCPW12) held in 2010 at Birkbeck College (England). The conference invited submissions on neurocomputational models of all cognitive and psychological processes. The special theme of this conference was OC From Theory to ApplicationsOCO, which allowed submissions of pure theoretical work and of pure applied work. This topic extended the boundaries of the conference and highlighted the extent to which computational models of cognition and models in general are integrated in the cognitive sciences. The chapters in this book cover a wide range of research topics in neural computation and psychology, including cognitive development, language processing, higher-level cognition, but also ecology-based modeling of cognition, philosophy of science, and real-world applications."

English Language Teaching Research in the Middle East and North Africa Sahbi Hidri

2018-11-23 This edited collection examines a range of English Language Teaching (ELT) research in the Middle East and North Africa (MENA). While the MENA context has witnessed considerable change in recent years, it has so far been under-represented in ELT research at both the regional and the international level. This book aims to fill that gap by surveying the current state of the field, examining in detail a range of issues and concepts, and suggesting future directions for further research. It will be of interest to ELT researchers and practitioners in general - not just those based in MENA contexts themselves.

Brazil, in June 2012. The four volumes contain papers presented in the following workshops: 7333 - advances in high performance algorithms and applications (AHPAA); bioinspired computing and applications (BIOCA); computational geometry and applications (CGA); chemistry and materials sciences and technologies (CMST); cities, technologies and planning (CTP); 7334 - econometrics and multidimensional evaluation in the urban environment (EMEUE); geographical analysis, urban modeling, spatial statistics (Geo-An-Mod); 7335 - optimization techniques and applications (OTA); mobile communications (MC); mobile-computing, sensing and actuation for cyber physical systems (MSA4CPS); remote sensing (RS); 7336 - software engineering processes and applications (SEPA); software quality (SQ); security and privacy in computational sciences (SPCS); soft computing and data engineering (SCDE). The topics of the fully refereed papers are structured according

to the four major conference themes: 7333 - computational methods, algorithms and scientific application; 7334 - geometric modelling, graphics and visualization; 7335 - information systems and technologies; 7336 - high performance computing and networks.

Plato in Renaissance

England S. Jayne 1995-02-28

This book offers a radical reappraisal of the reputation of Plato in England between 1423 and 1603. Using many materials not hitherto available, including evidence of book publishing and book ownership, together with a comprehensive survey of allusions to Plato, the author shows that the English were far less interested in Plato than most historians have thought. Although the English, like the French, knew the 'court' Plato as well as the 'school' Plato, the English published only two works by Plato during this period, while the French published well over 100 editions, including several of the complete Works. In England allusions to Plato occur

more often in prose writers such as Whetstone, Green, and Lodge, than in poets like Spenser and Chapman. Sidney did take his 'Stella' from Plato, but most English allusions to Plato were taken not directly from Plato or from Ficino, but from other authors, especially Mornay, Nani-Mirabelli, Ricchieri, Steuco, and Tixier.

Plato's Parmenides Samuel Scolnicov 2003-07-08 Of all Plato's dialogues, the Parmenides is notoriously the most difficult to interpret. Scholars of all periods have disagreed about its aims and subject matter. The interpretations have ranged from reading the dialogue as an introduction to the whole of Platonic metaphysics to seeing it as a collection of sophisticated tricks, or even as an elaborate joke. This work presents an illuminating new translation of the dialogue together with an extensive introduction and running commentary, giving a unified explanation of the Parmenides and integrating it firmly within the context of Plato's

metaphysics and methodology. Scolnicov shows that in the Parmenides Plato addresses the most serious challenge to his own philosophy: the monism of Parmenides and the Eleatics. In addition to providing a serious rebuttal to Parmenides, Plato here re-formulates his own theory of forms and participation, arguments that are central to the whole of Platonic thought, and provides these concepts with a rigorous logical and philosophical foundation. In Scolnicov's analysis, the Parmenides emerges as an extension of ideas from Plato's middle dialogues and as an opening to the later dialogues. Scolnicov's analysis is crisp and lucid, offering a persuasive approach to a complicated dialogue. This translation follows the Greek closely, and the commentary affords the Greekless reader a clear understanding of how Scolnicov's interpretation emerges from the text. This volume will provide a valuable introduction and framework for understanding a dialogue that continues to generate lively

The Essence of Truth Martin

Heidegger 2002-06-18

The Essence of Truth must count as one of Heidegger's most important works, for nowhere else does he give a comparably thorough explanation of what is arguably the most fundamental and abiding theme of his entire philosophy, namely the difference between truth as the "unhiddenness of beings" and truth as the "correctness of propositions". For Heidegger, it is by neglecting the former primordial concept of truth in favor of the latter derivative concept that Western philosophy, beginning already

with Plato, took off on its "metaphysical" course towards the bankruptcy of the present day. This first ever translation into English consists of a lecture course delivered by Heidegger at the University of Freiburg in 1931-32. Part One of the course provides a detailed analysis of Plato's allegory of the cave in the Republic, while Part Two gives a detailed exegesis and interpretation of a central section of Plato's Theaetetus, and is essential for the full understanding of his later well-known essay Plato's Doctrine of Truth. As always with Heidegger's writings on the Greeks, the point of his interpretative method is to bring to light the original meaning of philosophical concepts, especially to free up these concepts to their intrinsic power.

Studying English Literature

Tory Young 2008-05-22

Studying English Literature is a unique guide for undergraduates beginning to study the discipline of literature and those who are thinking of doing so. Unlike books that provide a survey of literary history or non-subject specific manuals that offer rigid guidelines on how to write essays, Studying English Literature invites students to engage with the subject's history and theory whilst at the same time offering information about reading, researching and writing about literature within the context of a university. The

book is practical yet not patronizing: for example, whilst the discussion of plagiarism provides clear guidelines on how not to commit this offence, it also considers the difficulties students experience finding their own 'voice' when writing and provokes reflection on the value of originality and the concepts of adaptation, appropriation and intertextuality in literature. Above all, the book prizes the idea of argument rather than insisting upon formulaic essay plans, and gives many ways of finding something to say as you read and when you write, in chapters on Reading, Argument, Essays, Sentences and References.

Biological Classification

The Republic Plato 2021-07 The Republic of Plato is the longest of his works with the exception of the Laws, and is certainly the greatest of them. There are nearer approaches to modern metaphysics in the Philebus and in the Sophist; the Politicus or Statesman is more ideal; the form and institutions of the State are more clearly drawn

out in the Laws; as works of art, the Symposium and the Protagoras are of higher excellence. But no other Dialogue of Plato has the same largeness of view and the same perfection of style; no other shows an equal knowledge of the world, or contains more of those thoughts which are new as well as old, and not of one age only but of all. Nowhere in Plato is there a deeper irony or a greater wealth of humour or imagery, or more dramatic power. Nor in any other of his writings is the attempt made to interweave life and speculation, or to connect politics with philosophy. The Republic is the centre around which the other Dialogues may be grouped; here philosophy reaches the highest point (cp, especially in Books V, VI, VII) to which ancient thinkers ever attained. Plato among the Greeks, like Bacon among the moderns, was the first who conceived a method of knowledge, although neither of them always distinguished the bare outline or form from the substance of truth; and both of them had to

be content with an abstraction of science which was not yet realized. He was the greatest metaphysical genius whom the world has seen; and in him, more than in any other ancient thinker, the germs of future knowledge are contained. The sciences of logic and psychology, which have supplied so many instruments of thought to after-ages, are based upon the analyses of Socrates and Plato. The principles of definition, the law of contradiction, the fallacy of arguing in a circle, the distinction between the essence and accidents of a thing or notion, between means and ends, between causes and conditions; also the division of the mind into the rational, concupiscent, and irascible elements, or of pleasures and desires into necessary and unnecessary-these and other great forms of thought are all of them to be found in the Republic, and were probably first invented by Plato.

Intelligent Information Processing and Web Mining

Mieczyslaw A. Klopotek

2013-06-05 This volume

contains articles accepted for presentation during The Intelligent Information Processing and Web Mining Conference IIS:IIPWM'04 which was held in Zakopane, Poland, on May 17-20, 2004. This conference is a continuation of a series of 13 successful symposia and conferences on Intelligent Information Systems, organized by the Institute of Computer Science of Polish Academy of Sciences, devoted to new trends in (broadly understood) Artificial Intelligence. The idea of organizing such meetings dates back to 1992. Our main intention guided the first, rather small-audience, workshop in

the series was to resume the results gained in Polish scientific centers as well as contrast them with the research performed by Polish scientists working at the universities in Europe and USA and their foreign collaborators. This idea proved to be attractive enough that we decided to continue such meetings. As the years went by, the workshops has transformed into regular symposia devoted to such fields like Machine Learning, Knowledge Discovery, Natural Language Processing, Knowledge Based Systems and Reasoning, and Soft Computing (i. e. Fuzzy and Rough Sets, Bayesian Networks, Neural Networks and Evolutionary Algorithms). At present, about 50 papers prepared by researchers from Poland and other countries are usually presented. This year conference devotes much more attention to the newest developments in the area of Artificial Intelligence, related to broadly understood Web mining.

Islamic Psychology G. Hussein Rassool 2021-03-31 Islamic Psychology or ilm an-nafs (science of the soul) is an important introductory textbook drawing on the latest evidence in the sub-disciplines of psychology to provide a balanced and comprehensive

view of human nature, behaviour and experience. Its foundation to develop theories about human nature is based upon the writings of the Qur'an, Sunna, Muslim scholars and contemporary research findings. Synthesising contemporary empirical psychology and Islamic psychology, this book is holistic in both nature and process and includes the physical, psychological, social and spiritual dimensions of human behaviour and experience. Through a broad and comprehensive scope, the book addresses three main areas: Context, perspectives and the clinical applications of applied psychology from an Islamic approach. This book is a core text on Islamic psychology for undergraduate and postgraduate students and those undertaking continuing professional development in Islamic psychology, psychotherapy and counselling. Beyond this, it is also a good supporting resource for teachers and lecturers in this field.

Key Themes in Public Health

Miranda Thurston 2014-06-27 'The growth of public health courses aimed at undergraduates has created a new need for textbooks that are appropriate and stimulating. Miranda Thurston has succeeded in producing something which strikes the right note. It is wide ranging in scope without being superficial and is accessible to the young learner. It is a sort of 'Wiki'. Just what the aspiring public health practitioner ordered.' - Professor John R. Ashton C.B.E., President of the UK Faculty of Public Health. Key Themes in Public Health comprises a series of introductory essays exploring key themes and concepts in public health.

Ranging from political and economic concern with improving population health and reducing health inequalities, to debates about how to protect populations from new health threats, as well as a concern with individual responsibility for lifestyles and behaviour, the themes discussed include:

determinants of health, globalisation, evidence, climate change, ethics, development, poverty, risk and population. Presenting provocative ways of thinking about key ideas in a concise fashion, each essay provides a basic grounding in the relevant theme as well as a departure point for further study by: Defining the theme in an accessible way Placing each idea in its particular social, political, economic and historical context Illustrating its application and significance for public health Identifying and exploring issues surrounding each of the themes This text provides an accessible overview for students new to public health who want to get to grips with the full range and

Brave New Digital

Classroom Robert J. Blake

2008 Brave New Digital

Classroom deftly interweaves results of pedagogical research and descriptions of the most successful computer-assisted language learning (CALL) projects to explore how technology can best be employed in the foreign-language curriculum to assist the second language acquisition process. Directed to all language teachers -- whether at the school or the postsecondary level, with or without prior experience -- this book focuses on how to use new technologies effectively. Blake urges teachers to move beyond a simple functional competence of knowing how to use the tools toward first a critical competence -- realizing what the various tools are good for -- and ultimately a rhetorical competence of knowing how the tools will help transform the learning environment. This book examines the effective

use of a range of technologies, from Internet sites through computer-mediated communication such as synchronous chatting and blogs, to distance learning. At the end of each chapter questions and activities demonstrate the interactionist, learner-centered pedagogy Blake espouses. An invaluable reference for experienced researchers and CALL developers as well as those of limited experience, Brave New Digital Classroom is also ideal for graduate-level courses on second language pedagogy. It will also be of interest to department chairs and administrators seeking to develop and evaluate their own CALL programs.

Australia, USA, and Canada). We are especially interested in students' and teachers' perception of academic misconduct and their definition and understanding of plagiarism. Most chapters discuss undergraduates' understanding of academic dishonesty and students' experiences using plagiarism softwares. The book also analyzes teachers' perception of cheating and how they respond to it. Writing is perceived by all of the teachers to be the most important form of assessment that required preventative measures in order to reduce the occurrence of academic dishonesty among students. Each chapter recommends strategies to fight plagiarism, such as establishing guidelines and regulations concerning academic integrity, awareness of the scale of the issue (scandals at all levels in most countries, even including famous scholars, administrators, and elected officials), assessing the damage done to academic reputation and credibility, developing trust

and credibility on social media (especially with the recent disturbing growth of fake news and data), minimizing the proliferation of dishonest accreditation, of identity theft, of fake peer-reviews, and fighting the growing number of fake papers, with or without the use of computer-generated academic works.

2020-06-20 This book provides a solid foundation for a comprehensive, systemic and water-centric approach to water management. Said approach integrates two performance principles essential for sustainable water use systems, namely equity and efficiency. Further, it decreases the policy space for decision-making encountered by water managers and makes it easier to arrive at reasonable solutions because of the bounded rationality inherent in its development. By combining the distributive and aggregative principles, the approach offers a transparent and autonomous structure for gathering water
